Subject: publications

Valerie,

for the purpose of prioritizing publications, let's put them into one of the following three categories:

- 1- Required
- 2- High priority
- 3- Medium priority

The "required" category would include publications on results of reduced harm product testing, or results of new assay validation studies.

There would be no low priority category, because we should not even be entertaining submitting one as part of our planning process.

→ High-
